Product Description

Tuff Jug 1.25 Gallon Jug with Auto Stop Spout - Compact Precision Pour Utility Container

The Tuff Jug 1.25 Gallon Jug with Auto Stop Spout is the ideal fueling companion for small equipment, precision top-off applications, and situations where a compact, easy-to-handle container is essential. At 5 liters (1.25 gallons), it is the lightest and most maneuverable container in the Tuff Jug lineup, and it carries the same Auto Stop Spout technology that sets Tuff Jug apart from every other utility jug on the market. When the tank is full, the spout stops flowing automatically. No spills, no monitoring, no wasted fuel. Available in Red and White.

Auto Stop Spout - Precision at Any Scale

Tuff Jug's Auto Stop Spout uses an internally vented design to deliver controlled, fast flow with automatic shutoff at full-tank capacity. This same technology that prevents overflow on a commercial zero-turn mower or a generator works just as effectively when filling a chainsaw, a string trimmer, or a small-displacement dirt bike. The internal vent system requires no external jug vent hardware and eliminates the exposure-related failure modes that affect conventional vent designs.

Available in Red and White

The 1.25 Gallon Auto Stop Jug comes in Red and White jug body colors. Red is the universal standard for gasoline identification. White is widely used for mixed fuel, two-stroke fuel, or alternative fuel types. These two colors support the most essential fuel identification needs for operators running gasoline-powered outdoor power equipment, from handheld tools to smaller engines, where misfueling with the wrong fuel type can cause immediate and costly engine damage.

Maximum Portability for Field Use

The 1.25-gallon size is designed for portability first. At full capacity, this jug is light enough for extended one-handed carry without fatigue, fits inside virtually any gear bag or storage compartment, and takes up minimal

space in a pack or equipment case. For tree climbers, trail riders, and professionals who need to carry fuel to a remote location, this is the container that gets the fuel where it needs to go without slowing you down.

Precision Fueling for Small Equipment

When fueling chainsaws, handheld blowers, string trimmers, hedge trimmers, and other small outdoor power equipment, precision matters more than volume. The Auto Stop Spout on the 1.25 Gallon Jug delivers a controlled, directed pour that fills small tanks accurately without spilling down the side of the machine or onto the ground. The spout tip can be positioned precisely, and the automatic cutoff ensures the tank is filled to capacity without overflow - even on small fuel tanks where the margin for error is minimal.

Durable Construction for Demanding Conditions

The Tuff Jug 1.25 Gallon container is built from the same premium high-density polyethylene used across the entire Tuff Jug lineup. It is impact-resistant, UV-stable, and chemically compatible with gasoline, mixed fuel, and other commonly used liquid fuels. The handle is shaped for a secure, comfortable grip, and the precision-threaded neck ensures the Auto Stop Spout seats and seals correctly every time it is installed. This is not a disposable container. It is a long-term investment in proper fueling equipment.

Ideal For

1. Chainsaw and handheld outdoor power tool fueling on job sites
2. Trail riding emergency fuel reserves for motorcycles and ATVs
3. Precision top-off applications where small volumes and accuracy matter
4. Secondary containers in a multi-jug field fueling system
5. Remote location fueling where compact, lightweight containers are required

Tuff Jug Quality You Can Count On

Whether you are a professional arborist, a weekend trail rider, a landscape contractor, or a motorsport competitor, the Tuff Jug 1.25 Gallon Jug with Auto Stop Spout delivers the reliability and performance that every fueling task deserves. The Auto Stop Spout prevents spills. The high-density polyethylene container resists damage. The compact size makes it practical to carry and use anywhere. This is the complete package for small-scale fueling.

Compatibility Note

The Auto Stop Spout is engineered for current-generation Tuff Jug containers and is not compatible with previous jug models. Verify your jug model before purchasing replacement components or accessories.
