Product Description

Tuff Jug 2.5 Gallon Jug with Auto Stop Spout - Controlled Pour 10-Liter Utility Container

The Tuff Jug 2.5 Gallon Jug with Auto Stop Spout combines the portability of a 10-liter container with Tuff Jug's signature automatic cutoff technology. When the tank is full, the spout stops the flow - no overflow, no wasted fuel, no mess to clean up. This is the daily-driver fuel container for landscape professionals, motorsport enthusiasts, farmers, and outdoor power equipment operators who want the most efficient, cleanest fueling experience possible in a mid-size format. Available in eight jug colors.

Auto Stop Spout - Automatic Overflow Prevention

The Auto Stop Spout is unique to Tuff Jug. It uses a proprietary internal venting system that doubles as an automatic cutoff mechanism. When the target tank reaches capacity, back pressure from the filling liquid triggers the spout to stop flow without any input from the operator. This prevents overflow spills that contaminate soil, create slip hazards, and waste expensive fuel. At the same time, the internal venting maintains a fast, consistent flow rate throughout the pour, so you get speed and control simultaneously.

No External Vents Required

The Auto Stop Spout handles all airflow management internally. There is no need for external jug vents that add complexity, create additional failure points, or risk accidental liquid discharge. The jug body stays clean and simple, and the venting system operates automatically every time the spout is in use. This design is particularly practical in dusty, muddy, or wet field conditions where external vent components are easily compromised.

Eight Jug Colors for Fuel Identification

The 2.5 Gallon Auto Stop Jug is available in Red, Clear, Kawi Green, Orange, Cool Blue, White, Black, and Hot Pink jug body colors. Color-coding your fuel supply is one of the most effective and simple steps you can take to prevent misfueling errors in multi-equipment environments. With eight color options, building a color-coded

system across your full range of fuel types and equipment groups is easy and immediately effective.

Mid-Size Portability with Full Professional Capability

At 2.5 gallons (10 liters), this jug occupies the ideal middle ground between compact personal containers and large commercial containers. It is light enough to carry one-handed when full and compact enough to fit in most gear bags, tool carriers, and ATV compartments. Yet it holds enough fuel to service multiple handheld tools, a commercial mower, or a motorsport machine through a complete operating cycle. For professionals who move between job sites frequently, this size reduces the number of trips to the fuel station without adding unnecessary weight or bulk to the equipment load.

Durable Professional-Grade Container

Like all Tuff Jug containers, the 2.5-gallon body is manufactured from high-density polyethylene chosen for its chemical resistance, impact strength, and ability to maintain structural integrity through repeated use cycles. The handle is ergonomically shaped, the base is flat and stable, and the neck threading ensures a reliable, leak-free seal with the Auto Stop Spout. This container is engineered to last, not to be replaced at the end of each season.

Primary Use Cases

1. Walk-behind commercial mower and trimmer fueling on job sites
2. Chainsaw and blower refueling in landscaping and tree service operations
3. Motocross and trail motorcycle fueling where portability matters
4. ATV and UTV trail operation fuel reserves
5. Farm equipment top-offs and small machine servicing

The Smart Choice for Clean Fueling

The Tuff Jug 2.5 Gallon Jug with Auto Stop Spout is the right tool for operators who want to fuel their equipment quickly and cleanly without the risk of spill. The automatic cutoff system does the monitoring work so you can focus on the task at hand, confident that the jug will stop the moment the tank is full. For anyone who has dealt with the mess, waste, and frustration of an overfilled tank, the Auto Stop Spout is the solution they have been looking for.

Compatibility Note

The Auto Stop Spout is designed exclusively for Tuff Jug containers. Current-generation components are not compatible with previous jug models. Confirm your jug model before purchasing replacement spouts or accessories.
