**SKU:** AS5-NoCap

**Categories:** [Tuff Jug](#)

### **Product Description**

## **Tuff Jug Auto Stop Spout - Replacement Internally Vented Fast-Flow Spout**

The Tuff Jug Auto Stop Spout is the signature spout system that defines what makes Tuff Jug different from every other portable fuel container on the market. Internally vented for fast, consistent flow and equipped with an automatic shutoff that stops fluid delivery the moment the target tank is full, the Auto Stop Spout combines speed and spill prevention in a single integrated component. This replacement spout is available in three sizes to fit all Tuff Jug container capacities, with an option to include a Storage Cap for complete cap assembly.

### **Auto Stop Technology - How It Works**

The Auto Stop Spout uses a proprietary internal venting system to deliver fluid at a consistent, high flow rate while simultaneously sensing back pressure from the filling tank. When the liquid in the target tank rises to the point where it contacts the spout tip, the resulting back pressure automatically stops the flow - no operator input required, no overflow, no spilled fuel. This is not a simple valve or a float system. It is an integrated fluid dynamics approach that delivers both speed and automatic cutoff as a combined function of the spout design. The Auto Stop Spout works only with Tuff Jug containers because it is calibrated to the specific internal geometry of the Tuff Jug jug and vent channel.

### **Internal Venting - No External Vents Needed**

Standard portable fuel containers rely on external vents - small holes or valves on the jug body - to equalize air pressure during pouring. These external vents are exposed to dirt, debris, and physical damage, and they create a secondary path for liquid to escape if the jug is tipped or handled roughly. The Tuff Jug Auto Stop Spout eliminates external vents entirely by routing all airflow internally through the spout structure. This keeps the jug body clean and simple, removes a category of potential failure points, and ensures the venting system is always functioning correctly as long as the spout is properly installed.

## Three Sizes for All Tuff Jug Containers

The Auto Stop Spout is available in three sizes:

1. 1.25 Gallon / 5L: Calibrated for the compact Tuff Jug 1.25 gallon container and its smaller internal vent channel geometry.
2. 2.5 Gallon / 10L: Sized for the mid-capacity 2.5 gallon Tuff Jug, delivering the full auto stop and fast flow performance of the system at the most popular container size.
3. 5 Gallon / 20L: The full-size spout for the flagship 5 gallon Tuff Jug, capable of moving 5 gallons with auto stop protection against overflow.

## Optional Storage Cap Inclusion

When ordering this replacement Auto Stop Spout, you have the option to include a Storage Cap for an additional charge. The Storage Cap provides a secure, sealed cap for the jug during storage and transport. If you do not already have a Storage Cap for your container, adding one to your spout order is an efficient way to ensure you have complete cap coverage for both active dispensing and storage scenarios in a single transaction.

## When to Replace Your Auto Stop Spout

1. If the auto stop function is not cutting off flow reliably
2. If the spout shows signs of physical damage, cracking, or seal degradation
3. After extended use with aggressive fuel blends that have stressed the internal seal materials
4. When adding a new Tuff Jug container to your fleet that requires a spout
5. As part of a seasonal equipment refresh for high-use commercial operations

## Works Only with Tuff Jug

The Auto Stop Spout is engineered specifically for Tuff Jug utility containers and is not compatible with other container brands. Its auto stop function relies on the specific internal geometry and vent channel dimensions of Tuff Jug containers to operate correctly. Current model spouts are designed for current-generation Tuff Jug containers and are not interchangeable with previous jug models. Confirm your jug model before ordering to ensure compatibility.

## The Defining Tuff Jug Innovation

The Auto Stop Spout is the reason Tuff Jug exists. It is the technology that sets Tuff Jug apart from every competitor in the portable utility jug space and the reason professional operators across landscaping, motorsport, agriculture, and fleet management choose Tuff Jug over conventional containers. If your current spout needs replacement, or if you are equipping an existing container without a spout, this is the component that restores the full Tuff Jug experience.
