Product Description

Tuff Jug Pail Spout - Auto Stop Pour Spout for 5-Gallon Pails with 38mm Thread

The Tuff Jug Pail Spout brings the innovation of Tuff Jug's Auto Stop technology to standard 5-gallon pails with 38mm threads. Combining flexible delivery with automatic shutoff, this spout transforms a basic pail into a precision pouring system. It is the ideal accessory for operators who work with bulk liquids in pail containers and want the same level of controlled, spill-free dispensing that Tuff Jug delivers in its dedicated utility jug lineup.

Auto Stop Technology in Pail Format

Tuff Jug's Auto Stop spout design automatically cuts off fluid flow when the target tank or container reaches its fill capacity. This overflow prevention capability is one of the most valued features in the Tuff Jug system and is now available for standard 38mm-threaded pail openings. No more watching the gauge, no more last-second reactions to a tank that filled faster than expected, and no more fuel on the ground. The auto stop function handles the monitoring so you can focus on the task.

Flexible Spout Design

The Pail Spout features a flexible construction that allows the spout to be angled and directed into tank openings in a variety of positions and orientations. This flexibility is particularly useful when filling equipment with awkwardly placed tank inlets, when pouring into containers in tight spaces, or when managing the pour angle of a heavy, full pail without spilling. The combination of flexibility and auto stop technology makes this spout a practical solution across a wide range of dispensing scenarios.

38mm Thread Compatibility

The Pail Spout is specifically designed for the 38mm thread size found on standard 5-gallon pails widely used in automotive, agricultural, landscaping, and industrial applications. If your pail uses this standard thread, the Tuff Jug Pail Spout is a direct-fit solution that requires no adapters or modifications. Installation is straightforward: thread the spout onto the pail opening, confirm a secure fit, and begin dispensing.

Upgrade Your Pail Pouring Experience

Pouring from a standard 5-gallon pail with a basic threaded cap or a generic spout is a practice that routinely results in spills, splashes, and wasted product. The pail is heavy, the pour rate is hard to control, and without an auto stop function, overfilling is a constant risk. The Tuff Jug Pail Spout eliminates all of these problems. It controls the flow rate, directs the liquid precisely, and stops automatically at full. For anyone handling bulk liquids in 5-gallon pails regularly, this spout is a meaningful quality-of-work improvement.

Broad Application Range

1. Engine oil and gear oil dispensing from bulk pails
2. Fuel dispensing from standard 5-gallon pails
3. Chemical and solvent transfer in industrial and agricultural settings
4. Water and fluid management in remote or off-grid situations
5. Any application involving a 38mm-threaded 5-gallon pail

Eliminating the Waste of Clumsy Pail Pouring

Without a proper spout, a 5-gallon pail is an awkward thing to pour from. The weight makes it hard to control. The opening is wide, making it easy to overshoot or splash. And without auto stop capability, you are always one moment of inattention away from an overflow spill. The Tuff Jug Pail Spout addresses all three of these issues simultaneously. The flexible spout gives you directional control. The auto stop function protects against overflow. And the secure 38mm thread means the spout stays connected to the pail firmly throughout the pour, without wobble or movement that leads to mis-directed flow.

Built to Tuff Jug Standards

The Pail Spout carries the same construction quality standards applied to every Tuff Jug product. It is built from materials that resist chemical exposure from common fuels, oils, and agricultural chemicals, and it is designed to maintain reliable auto stop function and leak-free operation through repeated use cycles. For operators who depend on pail-based dispensing as part of their daily workflow, the Tuff Jug Pail Spout is a durable, reliable investment that pays for itself quickly in reduced waste, reduced cleanup time, and reduced frustration.
