**Categories:** [Tuff Jug](#)

### **Product Description**

## **Tuff Jug 4-Pack Replacement Spout Caps - 3/4 Inch Auto Stop Spout Caps**

The Tuff Jug 4-Pack Replacement Spout Caps keep your Auto Stop Spout sealed, clean, and ready to use. These three-quarter inch caps are precision-manufactured to fit Tuff Jug Auto Stop Spouts perfectly, maintaining the leak-free seal that keeps your fuel contained and your equipment dry between uses. Since caps are small, easy to lose, and important to have on hand, this four-pack ensures you always have a spare ready when you need it most.

### **Designed for Tuff Jug Auto Stop Spouts**

These replacement caps are made to the same specifications as the original cap that ships with every Tuff Jug Auto Stop Spout. They are not a generic aftermarket alternative - they are sized, threaded, and sealed to match the Tuff Jug system exactly. When the cap is installed, the seal is complete, the spout tip is protected from contamination, and the jug is safe to store or transport without risk of accidental discharge. A properly sealed jug is a safe jug.

### **Includes Updated Spout Cap Seal**

Each cap in this four-pack comes with the updated Tuff Jug spout cap seal already installed. This seal is the critical gasket that creates the leak-proof connection between the cap and the spout tip. With a fresh, factory-installed seal on each cap, you get a proper tight fit from the moment you install the replacement, without the need to source or install seals separately.

### **Four Pack for Continuous Readiness**

Caps are lost. It happens on job sites, at trail heads, in pit boxes, and in the back of trucks. A four-pack keeps you covered through multiple losses or replacements without the interruption of placing a new order every

time one goes missing. For operations running multiple Tuff Jug containers, having a stock of replacement caps means every jug can be properly capped and stored at all times, regardless of what happens to individual caps in the field.

## **Keep Your Fuel Sealed and Your Equipment Protected**

A missing or worn spout cap creates several problems. Without a proper cap, the spout tip is exposed to contamination from dust, moisture, and debris. In transport, an uncapped or poorly sealed spout can allow fuel vapor to escape or, in the worst case, allow liquid fuel to leak. The Tuff Jug 4-Pack Replacement Caps solve all of these issues simply and affordably. Keeping spout caps properly installed is basic fuel containment practice, and having extras on hand makes that practice effortless.

## **Compact and Easy to Stock**

These replacement caps are small, lightweight, and take up almost no storage space. Keep a four-pack in your tool bag, pit box, or shop kit and you will never be caught without one. For commercial operations running multiple Tuff Jug containers across a fleet, ordering multiple four-packs and keeping them in a common supply location ensures that any operator can replace a missing cap on the spot without any workflow disruption.

## **Durable Construction**

Like all Tuff Jug components, these replacement caps are manufactured from durable materials that resist fuel exposure, UV degradation, and the physical stress of regular use. The threading is precise, the seal contact surface is clean and true, and the cap profile provides a secure grip for easy installation and removal even with gloves on. These are not disposable caps. They are replacement-grade components built to last.

## **An Affordable Piece of a Complete Fueling System**

The Tuff Jug 4-Pack Replacement Spout Caps represent the most basic level of Tuff Jug system maintenance. At a fraction of the cost of any other component in the system, they play an outsized role in keeping the entire setup ready and reliable. A capped spout means a sealed jug means a safe, clean fueling system. Stock these and move on.
