Product Description

Tuff Jug Spout Adapter - Leak-Proof Auto Stop Spout Accessory for Small Tank Openings

The Tuff Jug Spout Adapter extends the versatility of the Auto Stop Spout to tank openings that are too small for direct spout-to-tank fueling. Designed with Viton o-rings for a leak-proof seal, the Spout Adapter threads directly onto the tip of the Tuff Jug Auto Stop Spout and channels fuel into smaller tank inlets - from cars and trucks to chainsaws, yard equipment, and late-model vehicles with capless tank filling systems. One adapter, endless compatibility.

What the Spout Adapter Does

The standard Tuff Jug Auto Stop Spout is optimized for large-mouth tank openings commonly found on outdoor power equipment, generators, and off-road vehicles. However, many common fueling scenarios involve tank inlets that are simply too small for the standard spout diameter. The Spout Adapter solves this problem by providing a tapered, narrower tip that threads onto the existing Auto Stop Spout and inserts directly into smaller openings. No funnels, no spills, no wasted fuel - just a clean, directed pour into whatever tank you are filling.

Viton O-Ring Seal

The Tuff Jug Spout Adapter uses Viton o-rings to create a positive, leak-free connection at the spout interface. Viton is the material of choice for fuel system seals due to its superior chemical resistance, temperature stability, and durability under repeated use cycles. The o-ring seal ensures that no fuel leaks at the adapter-to-spout connection, keeping the fueling process clean and the working environment free of spilled fuel.

Versatile Compatibility

The Spout Adapter is compatible with:

1. Car and truck fuel tank inlets, including late-model vehicles with capless tank filling systems
2. Chainsaw fuel tanks

3. Yard and garden equipment with small-mouth fuel tanks
4. Generator fuel inlets
5. Any tank opening measuring at least 0.8 inches in diameter

The adapter works in conjunction with the Auto Stop Spout on all three Tuff Jug container sizes - 1.25 gallon, 2.5 gallon, and 5 gallon - making it a universal accessory across the entire Tuff Jug lineup.

Understanding Flow Rate with the Adapter

Using the Spout Adapter will result in a slower flow rate compared to using the Auto Stop Spout alone. This is due to two factors: the adapter's smaller internal diameter restricts flow compared to the full-bore spout, and a vent line cannot extend fully to the tip of the adapter, which reduces airflow slightly. For operators who primarily use the adapter and want to improve flow rate, installing an external poly vent on the Tuff Jug container is recommended. The external poly vent adds airflow capacity and noticeably improves pouring speed when the adapter is in regular use.

Simple Installation and Use

The Spout Adapter threads directly onto the tip of the existing Auto Stop Spout. No tools required. Installation takes seconds, and the adapter can be removed just as quickly when it is not needed. The adapter's profile is designed to insert smoothly into small tank openings, and the Viton o-ring seal holds position securely during the pour without requiring the operator to apply pressure to maintain the connection.

Eliminating the Need for Funnels

A funnel is a common solution for filling small tank openings, but funnels introduce their own set of problems: they spill when tipped, they require two hands to manage safely, they collect debris, and they add an extra piece of equipment to carry and clean. The Tuff Jug Spout Adapter delivers all the benefits of a funnel with none of the drawbacks. It stays connected to the spout, it seals the connection, and it directs flow cleanly without splashback or overspray.

A Practical Addition to Any Tuff Jug System

The Tuff Jug Spout Adapter is a low-cost, high-value accessory that dramatically expands the range of fueling applications your Tuff Jug system can handle. Whether you are topping off a truck at the job site, fueling a chainsaw mid-job, or managing a generator during a power outage, this adapter ensures that no tank opening is too small for the Tuff Jug. Add it to your kit and stop worrying about whether your spout will fit.
